Where are we?

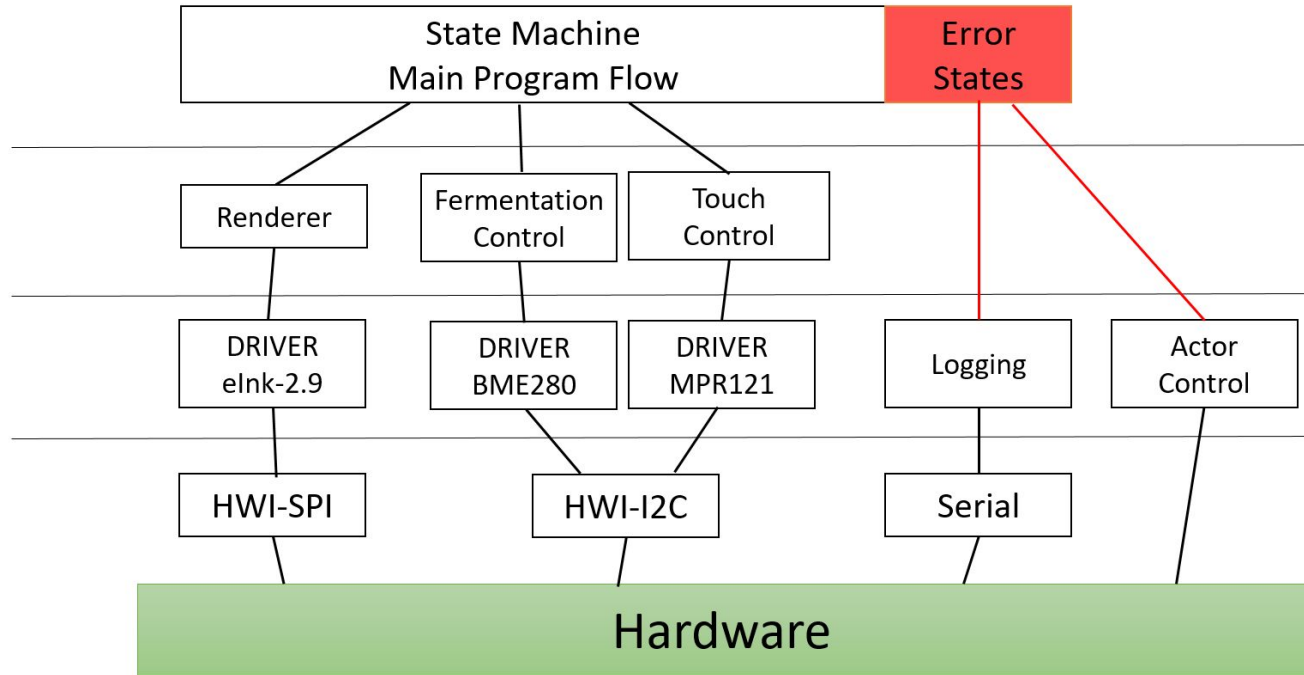

Milestones

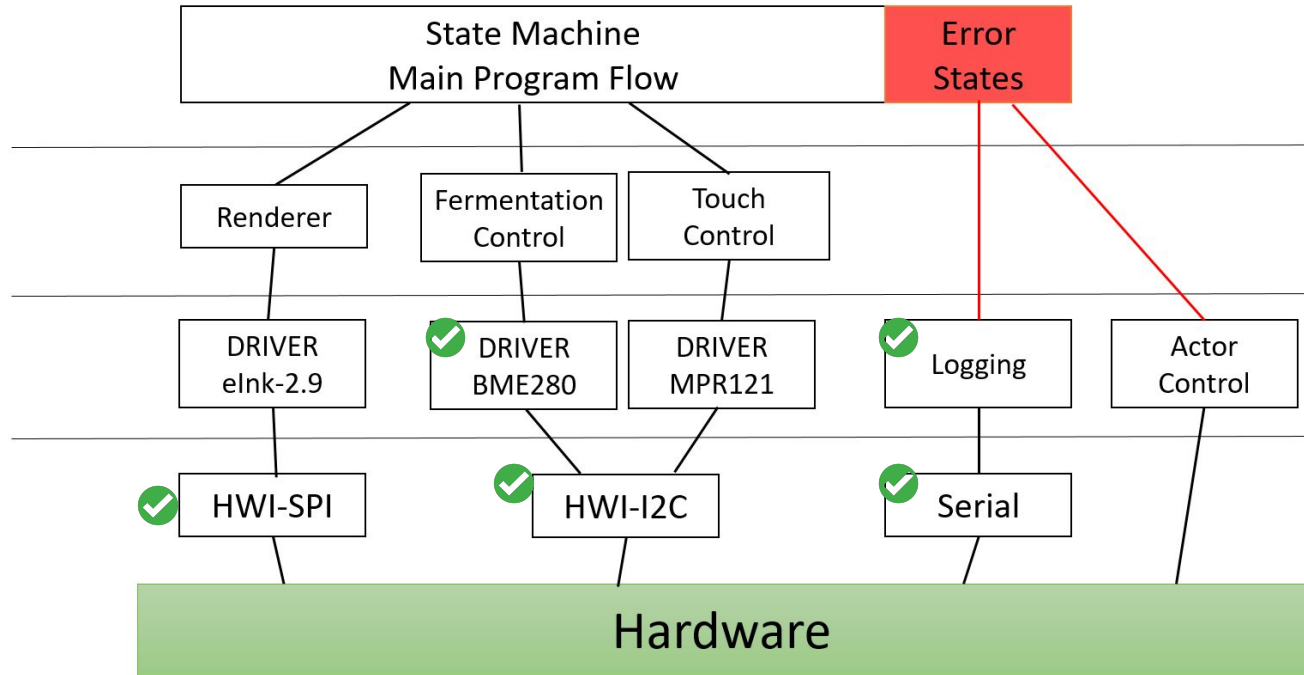

Milestones

SW Architecture

SW Architecture

Hardware

Arduino Uno & Adafruit Pro Trinket

ATmega328P

UNO for serial communication

Trinket: 3.3V | UNO 5V

Trinket: 10 € | UNO: 10 €

Humidity Sensor BME280

Humidity and Hardware Sensor

I2C

~6€

Capacitive Touch MPR121

Capacitive Touch

I2C

~2€

Heating Element

Heating Cable

24V / 30W

IPX7

AC/DC

~30€

Waveshare eInk 2.9inch

Electrophoretic (eInk) Display

SPI

~16€

Challenges & Blockers

Blockers

None! :)

Challenges

(Logging)

Hardware Failure

Bad Documentation

Heating Element

Display Driver Implementation

```
void display_send_command(uint8_t command)
{
    // may not send commands while display is busy
    display_wait_until_idle();

    // make display interpret data as command
    // by setting the Data/Command pin to low
    // high pin would lead to interpretation as data
    PORTB &= ~_BV(DC_PIN);

    // send command
    spi_main_transmit(command);
}
```

```
void display_send_data(uint8_t data)
{
    // may not send data while display is busy
    display_wait_until_idle();

    // make display interpret data as command
    // by setting the Data/Command pin to low
    // low pin would lead to interpretation as command
    PORTB |= _BV(DC_PIN);

    // send data
    spi_main_transmit(data);
}
```
